

3

Strategies for Building AI-Ready Apps

Enhance your applications with cutting-edge AI technologies

1

Architect for Global Scale

Ensure high availability and reliability across your applications.

- Design for multi-cloud, multi-region resilience
- Ensure strong consistency and low-latency transactions
- Learn patterns from real-world YugabyteDB architectures

Modernize Legacy Databases

2

Transition without disruption to improve performance and accessibility.

- Plan for seamless PostgreSQL migrations
- Leverage automation to minimize downtime
- Adopt distributed SQL to ensure you are future-ready

3

Build & Deploy Faster

Leverage AI-driven tooling for rapid development and deployment.

- Engage in hands-on labs and live demos
- Integrate AI workloads directly into your data platform
- Use distributed SQL to accelerate developer productivity
